

FEATURE: search for an object

In order to find an object that the user is interested in buying

The user should be able to search for an object

Scenario: search for an object

GIVEN I'm on any page

WHEN I type in the name of an object in the search bar

AND I push enter

GIVEN there's no match

THEN I'll be referred to a page that tells me that there are no matches

GIVEN that there's one or more matches

THEN I should be redirected to a page that shows all objects with that name

FEATURE: Category

Scenario: User want to only see a specific category

GIVEN that I have the categories in front of me

WHEN selecting one specific category

AND clicking on that specific category

THEN it will filter out to selected category

FEATURE: Filter objects

SCENARIO: Filter objects based on status, time etc.

GIVEN that I am on auction page

WHEN I check any of the filter boxes of my choosing

AND objects match the filter criteria

THEN filtered result will be shown
